

SEATOWN'S RIVER WALK

On our second full day back at school after lockdown, we wanted to enjoy the freedom of being outdoors in the gorgeous Spring sunshine. As we have been studying rivers, we visited our village one and identified some key features that we had been learning about online.

We are lucky to live in
such a beautiful,
peaceful place...

... even though it can
be a bit hilly!

At least
we're still
smiling!

Time to relax....

... and play Pooh sticks.

The river channel meanders (bends) causing erosion on the outside of the bend and deposition on the inside.
Can you see this in the photos?
Can you see how a wall has been built to stop erosion on the outside bend?
The river borders a garden. What would happen if the wall wasn't there?

Here, the fallen tree is causing a natural dam to build as leaves and twigs get caught in it. A perfect place for animals to enjoy...

...as well as us!
